

#### Explanations

To prevent user from pressing the wrong button the event produced by the button should be done only after not only clicking but also a pressing the control for a few seconds, or with a double tap

## Notes

The tab system won't be included in rPod Telemetry System

The rPod Telemetry System has only a first tab that displays current parameters of the pod

"Explanation" field is not valid for rPod Telemetry System

## Explanations

Double tap/double click on sector of parameters sends user to statistic analysis pad

Double tap/double click on current location sends user to map

Left or right flipping changes the to next or previous pad (For touch screens)

Pad 1

Pad 2

Pad 3
